For millennia, “ the North ” has held a powerful sway in Western culture. Long seen through contradictions—empty of life yet full of promise, populated by indigenous communities yet ripe for conquest, pristine yet marked by a long human history—it has moved to the foreground of contemporary life as the most dramatic stage for the reality of climate change. This book brings together scholars from a range of disciplines to ask key questions about the North and how we 've conceived it—and how conceiving of it in those terms has caused us to fail the region 's human and nonhuman life. Engaging questions of space, place, indigeneity, identity, nature, the environment, justice, narrative, history, and more, it offers a crucial starting point for an essential rethinking of both the idea and the reality of the North.

An acclaimed natural history writer follows the trail of the remarkable hummingbird all over the world. Hummingbirds are a glittering, sparkling collective of over three hundred wildly variable species. For centuries, they have been revered by indigenous Americans, coveted by European collectors, and admired worldwide for their unsurpassed metallic plumage and immense character. Yet they exist on a knife-edge, fighting for survival in boreal woodlands, dripping cloud forests, and subpolar islands. They are, perhaps, the ultimate embodiment of evolution's power to carve a niche for a delicate creature in even the harshest of places. Traveling the full length of the hummingbirds' range, from the cusp of the Arctic Circle to near-Antarctic islands, acclaimed nature writer Jon Dunn encounters birders, scientists, and storytellers in his quest to find these beguiling creatures, immersing us in the world of one of Earth's most charismatic bird families.
