Your brain on love: A chemical high - CNN
 Intense romantic love activates the striatum, home of the nucleus accumbens—a region of the brain that is often referred to as the “pleasure center.” Intense romantic love also activates the...

This Is Your Brain on Love | Psychology Today
 You may have heard of oxytocin, sometimes called the “love hormone.” Human and animal studies have shown that oxytocin plays a role in bonding; when released in your brain during certain types of human contact, it has the effect of bonding you to the other person involved. This makes a lot of sense, because oxytocin is known to be released when a woman is nursing her infant, when two people are hugging, and during sexual activity.

Rihanna - Love On The Brain - YouTube
 Love, Fisher points out, is not an emotion — it’s “a motivation system, it’s a drive, it’s part of the reward system of the brain.” It’s typically characterized by high dopamine and norepinephrine, but also by low serotonin, which is responsible for the obsessive thinking attached to romantic love — something Fisher confirmed in her fMRI studies.

This Is Your Brain on Love – Brain Pickings
 Cortisol and serotonin levels return to normal. Love, which began as a stressor (to our brains and bodies, at least), becomes a buffer against stress. Brain areas associated with reward and pleasure are still activated as loving relationships proceed, but the constant craving and desire that are inherent in romantic love often lessen.
